ABSTRACT
This poster presents a summary of a 3rd year Information Systems internship that was completed for the Research Committee of the College of Business and Economics at the University of Canterbury.

The aim of the project was to develop a prototype of an application that would allow the research committee to track the publication pathways of academic staff in the College of Business and Economics.

At the conclusion of the course the system had not been implemented, but the overall aim of gaining a fuller understanding of the issues involved in developing such an application had been achieved.
